

Planting guide

- 1 Dig a hole removing about 10 shovels of soil**
This removes weeds and provides a rain trap and wind protection.

- 2 Add a bucket of water**
with soil wetter if ground is dry.

- 3 Carefully remove plant from pot**
without disturbing soil around its roots.

- 4 Dig a pot sized hole in the wet soil to take plant**
compact soil around plant and add fertiliser tablet next to (not on) the roots.

- 5 Add half a bucket of water**
to settle plant in.

- 6 Add a plant guard**
hammer stakes in hard - the wind is strong!
